WHO WE ARE

Indonesia's Premier Design-Build Contractor

Founded in 2015, IBK has grown from a specialist MEP subcontractor into a fully integrated design-build contractor — controlling every element of a project from structure and architecture through to full MEP and complete material supply.

We source and supply all materials directly, with a deliberate focus on **durability, longevity, and minimum lifetime maintenance cost**. Every specification we use is chosen because it performs — not because it is the cheapest option available.

Our mission: to deliver projects that stand the test of time, require minimal upkeep, and reflect the lasting quality that our clients deserve.

What Sets Us Apart From Every Other Contractor

Most contractors build to code. IBK builds to perform. We engineer every element of a project around one principle: what will this building cost to own and maintain over 20 years?

We control the entire delivery chain — structure, architecture, full MEP, and all material supply — with a deliberate focus on **durability, longevity, and minimum lifetime maintenance cost**. Every specification we use is chosen because it performs — not because it is the cheapest option available.

Our mission: to eliminate the hidden costs that plague conventional construction — repainting, termite damage, cracking, waterproofing failure, and corrosion — before they ever occur.

Full-Scope Delivery Under One Contract

Structure

K-400 concrete, TS-420 steel, and a double-beam settlement system engineered for Jakarta's coastal soils. High-spec from foundations up.

Architecture

Fully integrated design-build. Climate-adapted systems throughout — no timber, no paint, no red brick. Built to last without the maintenance cycle.

Electrical

Kabelmetal, Supreme, Extrana, and Jembo cabling. Schneider and Chint panel systems. Specified for decades of safe, reliable service.

Plumbing

PPR Toro Italy for potable water. Rucika PVC for drainage. Magnaplast acoustic for kitchen waste. Zero-leak systems that stay that way.

Fire Suppression

Complete sprinkler and fire-fighting installation. Proven across residential, hospitality, hospital, data center, and industrial facilities.

HVAC

VRV and central systems for residential, hotel, industrial, and data center environments. Sized and specified for Indonesia's climate.

Smart Home & Automation

Aqara lighting automation and smart locks · Unifi networking and CCTV · Solar and battery with live dashboard · Full ecosystem integration

Built for Indonesia's Climate, Soil & Long-Term Reality

Seismic Gap System

AAC blocks installed with deliberate gap against columns and beams — filled with backer rod and sealant. Eliminates hairline cracking from structural movement, the most common defect in Indonesian homes.

Zero Wood

Termites are Indonesia's most expensive hidden defect. Every door, panel, cabinet, and ceiling in our buildings is wood-free. Aluminium honeycomb, WPC, and soft ceramic replace timber in every application.

Triple-Layer Waterproofing

Adhesive membrane + polyurethane coating + integral concrete admixture in all basement and wet area construction. Belt-and-suspenders protection where most contractors apply one layer at best. Basement water ingress is one of the most expensive defects to remediate.

Zero Paint

WPC panels and soft ceramic replace paint entirely. No repainting cycle every 3–5 years. No smell during construction. Faster handover. Zero peeling, blistering, or moisture damage — ever.

Double Beam Structure

Transfer beam system distributes loads across two beams instead of one. Controls differential settlement on Jakarta's coastal clay and soft alluvial soils — preventing the cracking, door misalignment, and structural distress that afflicts conventional builds after 5–10 years.

Minimized Steel Structure

Steel corrodes in Indonesia's coastal humidity and tropical rainfall. Where structure permits, RC concrete and post-tension systems replace exposed steel — eliminating rust-driven maintenance costs over the building's lifetime.

Every Material Chosen to Perform Over Decades, Not Just on Day One

We Use	Instead Of	Why It Performs Better	Lifetime Benefit
Sintered Stone Flooring	Marble / Natural Stone	Non-porous, acid & scratch resistant, UV stable, dimensionally stable under settlement	Zero sealing, zero polishing, zero staining — ever
PU Stone & Soft Ceramic	Travertine / Natural Stone	No pores to collect dirt, no sealing required, faster installation in large format with fewer joints	No resealing cycle, no staining, antibacterial surface
AAC Blockwork + Seismic Gap	Red Brick, tight to structure	Decouples infill wall from structural frame — absorbs thermal and seismic movement without transferring stress	Zero hairline cracking over building lifetime
WPC Wall & Ceiling Panels	Timber, gypsum, paint	Waterproof, termite-proof, scrubbable, UV stable — installed as final finish with no painting required	Zero repainting, zero rot, zero termite damage
Aluminium Honeycomb Doors	Timber doors	Structurally rigid, warp-proof, termite-proof — will not swell, crack, or deform in Indonesia's humidity	Lifetime door function, zero swelling or warping
Zero Paint Finish	Paint on plaster / render	WPC and ceramic replace paint entirely — no volatile compounds, faster programme, immediate occupancy	No repainting every 3–5 years, no smell, lower cost

The true cost of a building is not what you pay to build it — it is what you pay to maintain it for 20 years.

What Conventional Construction Costs You Over 20 Years

Repainting Every 3-5 Years

A typical Jakarta home spends IDR 50-100 million per repaint cycle. Over 20 years, that is IDR 200-400 million — on a finish that peels, blisters, and fades in tropical humidity. IBK eliminates this entirely.

Wall Cracking

Hairline cracks appear in 90% of Jakarta homes within 5-10 years. Caused by structural movement transferring to infill walls. IBK's seismic gap system decouples walls from structure — zero cracking, guaranteed.

Basement Water Ingress

Basement flooding is one of the most expensive defects to fix after construction. Most contractors apply one waterproofing layer. IBK applies three — adhesive membrane, PU coating, and integral admixture — because remediation costs 10x prevention.

Termite Damage

Termites are invisible until the damage is catastrophic. Conventional timber doors, frames, and ceilings create a buffet. IBK uses zero wood in every application — aluminium honeycomb, WPC, and soft ceramic throughout.

Foundation Settlement

Jakarta's coastal clay causes buildings to settle unevenly — doors jam, floors slope, walls crack. IBK's double beam system distributes loads across two beams, controlling differential settlement from day one.

Steel Corrosion

Exposed steel in Jakarta's humid coastal environment corrodes relentlessly. IBK minimises steel exposure by using RC concrete and post-tension systems where possible — eliminating decades of rust-driven maintenance.

Luxury Design-Build · PIK2 Jakarta

FLAGSHIP PROJECT — LUXURY RESIDENTIAL

Rumah Lotus

Contract Value	IDR 60,000,000,000
Scope	Structure + Architecture + MEP
Location	PIK2, Jakarta
Period	2025 – 2026
Standard	IBK 16,000,000 / m ² Design-Build System

BUILDING TECHNOLOGY

K-400 Concrete	Double Beam System
AAC + Seismic Gap	WPC Wall & Ceiling
Sintered Stone Floors	Aluminium Honeycomb Doors
Aqara Smart Lighting	Unifi Network & CCTV
Solar + Battery Backup	Zero Paint Finish
PPR Toro Plumbing	Midea VRV HVAC

Built for Indonesia's FDI Industrial Wave

As foreign manufacturers expand into Indonesia's industrial estates (Subang, Karawang, Batang, Kendal), IBK offers proven full-scope delivery for factory and warehouse facilities — directly contracted, no intermediary.

**Reference: Subang Prosperity Hat Factory — IDR 100B,
Structure + Full MEP, 2025–2026**

Data Center Experience — HDC Hyperscale Cikarang (IDR 40B) +
SCBD Data Center (IDR 35.5B)

Full MEP

Plumbing, fire suppression, HVAC, electrical — complete installation to industrial grade.

Structure

RC frame, pre-engineered steel, heavy-duty foundations. High bay clearance and heavy floor loading experience.

Factory & Warehouse

Proven delivery on manufacturing and logistics facilities. Utility distribution, fire suppression for production environments, industrial drainage.

Timeline Reliability

Industrial clients have fixed machinery installation and production start dates. We build programmes around your operational milestones — not the other way around.

Hospitals, Offices & Critical Facilities

From BSI Tower Jakarta to two hospital projects delivered back-to-back, IBK brings the same engineering discipline to commercial and healthcare facilities — where system reliability, fire safety compliance, and build quality are non-negotiable.

**Reference: RS Rengasdengklok + RS Adhyaksa Banten —
Combined Plumbing, Fire, Electrical — 2023-2025**

Healthcare: RS Rengasdengklok + RS Adhyaksa Banten
Commercial: BSI Tower Jakarta + IBK Head Office Pluit (6 Floors)

Hospital MEP

Medical gas, clean water, drainage, fire suppression, electrical, and HVAC — all to healthcare-grade standards. Two hospital projects delivered successfully.

Office & Commercial

BSI Tower Jakarta — plumbing and fire suppression for a major financial institution. IBK Head Office Pluit — full scope across 6 floors, built to our own standard.

Fire & Life Safety

Complete fire suppression systems across hospitals, hotels, offices, and data centres. Proven compliance with Indonesian fire codes and international brand standards.

Regulatory Compliance

Healthcare and commercial projects require strict regulatory and safety compliance. IBK delivers to code with full documentation — no shortcuts, no grey areas.

Sanitary	Jomoo Premium	Lift	Linvol / Aolida
Facade	Soft Ceramic Cladding + PU Stone Feature Panels · Zero paint, zero sealing, zero maintenance cycle · UV stable, weatherproof, antibacterial — designed to perform for the lifetime of the building		

Complete Your Build

Available as additions to any IBK Design-Build contract

Aluminium Honeycomb Cabinetry

IDR 8–10jt / m²

Built-in kitchens, wardrobes, vanities, and storage. Structurally rigid, warp-proof, and termite-free. Priced per m² of cabinet face.

Designer Furniture Collection

Contact for catalogue

European-aesthetic designer pieces — sofas, dining, bedroom, and accent furniture — sourced and supplied by IBK at significantly below retail. Priced per item, full room styling available on request.

Smart Home & Automation

Quoted per scope

Aqara lighting automation and smart locks · Unifi networking and CCTV · Full ecosystem integration. Designed, supplied, and installed by IBK.

Solar & Battery System

Quoted per scope

Rooftop solar with battery backup and live monitoring dashboard. Reduces operating costs and provides resilience against grid outages. Fully integrated into IBK's smart home ecosystem.

How Much Will Your Building Cost You After You Build It?

Conventional Construction

Lower upfront cost. Higher lifetime cost. Repainting every 3-5 years. Termite remediation. Crack repairs. Waterproofing failures. Door replacements. Floor re-polishing. The maintenance cycle never ends.

One Contract

Structure, architecture, full MEP, material supply, smart home, and solar — all under one contract. No coordination risk between multiple contractors. No gaps in accountability.

Jakarta & Java

Based in Jakarta with proven delivery across Java. From PIK2 luxury residential to Subang industrial estates. Nationwide capability for the right project.

IBK Design-Build

Higher specification. Lower lifetime cost. Zero repainting. Zero termite risk. Zero cracking. Triple waterproofing. Corrosion-resistant structure. Every material chosen to eliminate maintenance — not minimise it.

Proven Track Record

IDR 300B+ in delivered projects. Hilton Hotels international brand standard. Hyperscale data centres. Hospitals. Industrial facilities. From luxury residential to the most demanding technical environments.

Ready to Start

Contact us to discuss your project. We will assess your site, scope your requirements, and show you exactly what IBK delivers — and what it will save you over the lifetime of your building.

LET'S BUILD TOGETHER

Ready to deliver your next project.
